

Photoshop Part-5, Image Menu

(1) **Mode:** Using this, you can change the color mode of any image, with a variety of modes.

(2) **Adjustment:** It includes more options such as:-

✎ **Level:** This allows you to select the Level of Your Image, Increase Contrast, Subtract, etc.

Auto Levels: This will set automatic level.

Auto Contrast: You can also set automatic Contrast.

Auto Color: With its help, you can bring darkness in any color.

✎ **Curve:** With this you can adjust the color of any image from your lips like increasing contrast, filling colors, mixing colors, etc.

✎ **Color Balance:** Its work is being known by its name, through this you can manage color in any image and put a little effect in your image.

✎ **Brightness / Contrast:** Through this you can increase or decrease the Brightness or Contrast in any photo.

✎ **Hue / Saturation:** Using this, you can add color effect to any image and make the image a little attractive.

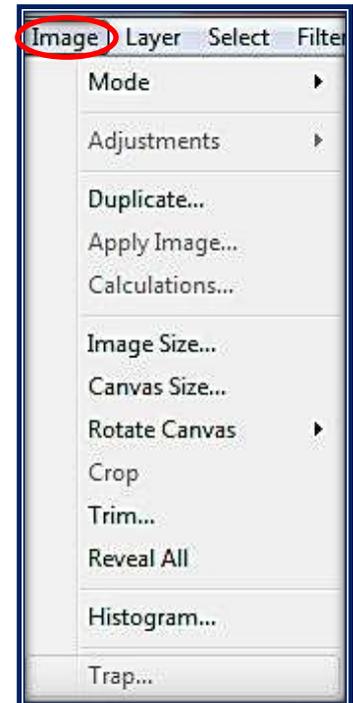

✎ **Desiderate:** It is used to make any image black and white.

✎ **Replace Color:** Through this you can replace any color.

✎ **Selective Color:** Through this also you can increase the darkness slightly in any image.

✎ **Channel Mixer:** With the help of this, you can give different-different colors in your image.

✎ **Gradient Map:** Through this you can put Gradient Effect in any image.

✂ **Invert:** It is used to make photos negative.

✂ **Equalize:** Its job is that if there are any spots on any photo, then you can find out using this option because it highlights the place where there is some defect in the image...

✂ **Threshold:** Using this will make your photo black and white.

✂ **Posterize:** It is used to put an effect in the background of the image, such as a poster or a flex banner is in the print....

✂ **Variations:** This option is quite fun because when you will open any image in Photoshop and click on this option, you will see many similar images which will be seen in different effects.

(3) **Duplicate:** It is very much used in Photoshop because if you open any image inside Photoshop and work on it without duplicating it, then that image will be spoiled, so before working on any image, The duplicate is made so that the original image is safe.

(4) **Apply Image:** Through this option, you can do work like Layer, Channel and blending on any of its images.

(5) **Calculation:** In this also the same option was given which was in the option with Apply Image, but it has some option Extra which you can check in turn.

(6) **Image Size:** Within this you will see the option that you can increase or decrease the pixel, size and resolution of any image.

(7) **Canvas Size:** From this you can see the size of the current page.

(8) **Rotate Canvas:** Through this option, you can transform any image.

(9) **Crop:** This option saves the area you have selected, and removes everything else.

Photoshop Part-6, Layer Menu

- (1) **Duplicate layer:** This creates a Duplicate layer.
- (2) **Delete:** Can be used to delete a layer
- (3) **Layer Properties:** Through this option you can show all the layers in different colors.
- (4) **Layer Style:** Many options come inside it like:-

Blending Option: Through this you can transparent / Blend any image selected.

✂ **Drop Shadow:** Through this you can cast shadow in any image from outside

✂ **Inner Shadow:** Through this you can also cast a shadow in any image, but it will put a shadow inside the image...

✂ **Outer glow:** We use it to bring a little glow around the image and yes the brightness can be of any color, you can apply what you want to apply and you can also use gradient color in it. |

✂ **Bevel and emboss:** Using this you can show any image in 3D

✂ **Satin:** It is also used to put an effect between any pictures inside the layer.

✂ **Color Overlay:** Through this you can apply the "picture" in the selected layer according to the color.

✂ **Gradient Overlay:** This is also similar to Color overlay but it is used to apply background or effect according to foreground or gradient color.

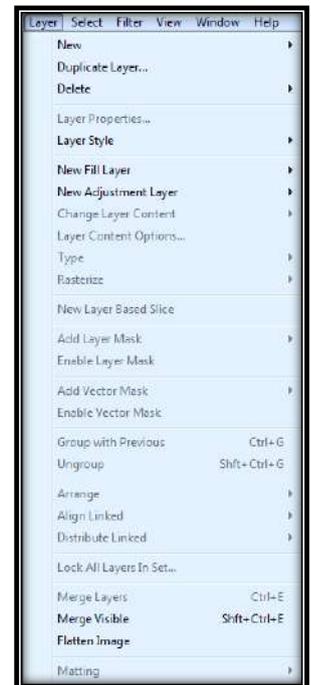

✂ **Gradient Overlay:** This is also done on the top side of the image to add gradient color effect.

✂ **Stroke:** This option is used for the outline glow effect; you can use any color or gradient in it.

✂ **Copy layer Style:** It is used to paste the copied layer style into another layer style.

✂ **Clear Layer Style:** It is used to clear the layer style.

✂ **Global Light:** It is used to change the direction of effect like Angle, Drop Shadow, Inner Shadow, Inner glow and Outer glow on any layer with the help of Angle.

✂ **Create Layer:** When you click on Create Layer after applying effects like Drop Shadow, Inner Shadow, Outer Glow etc., and a new layer is created on that picture.

✂ **Hide All Effect:** Use this option to hide all the type of effect applied to the picture.

(5) **Scale Effect:** Use it to increase the effect on any image through scale.

(6) It is used to bring solid color, gradient, pattern during New Adjustment Layer: layer.

(7) **Change Layer Content:** As soon as you take the new layer, the option of layer adjustment is shown, which also includes many options ...

(8) To use or see all types of options related to Type: Text, use this option.

(9) **Rasterize:** Text / Paragraph written through it is resized.

(10) **New Layer Based Slice:** According to the layer it is used to apply slice.

(11) **Add Layer Mask:** Use it to apply layer mask, let me tell you that it has the option of Reveal All and Hide All, the color of the mask becomes white when you apply Reveal All and black when you apply Hide All. It happens

(12) **Enable / Disable Layer Mask:** It is used to enable and disable the layer mask.

(13) **Enable / Disable Vector Mask:** It is used to enable or disable the vector mask applied.

(14) **Ungroup:** When you have grouped any object, then this option will appear ungroup here otherwise the group will appear

(14) **Arrange:** Through this you can arrange any layer i.e. Bring to front, bring forward, send backward & send to back.

(15) **Align/Distribute linked:** It uses two or more link layer to align left, right, up and down.

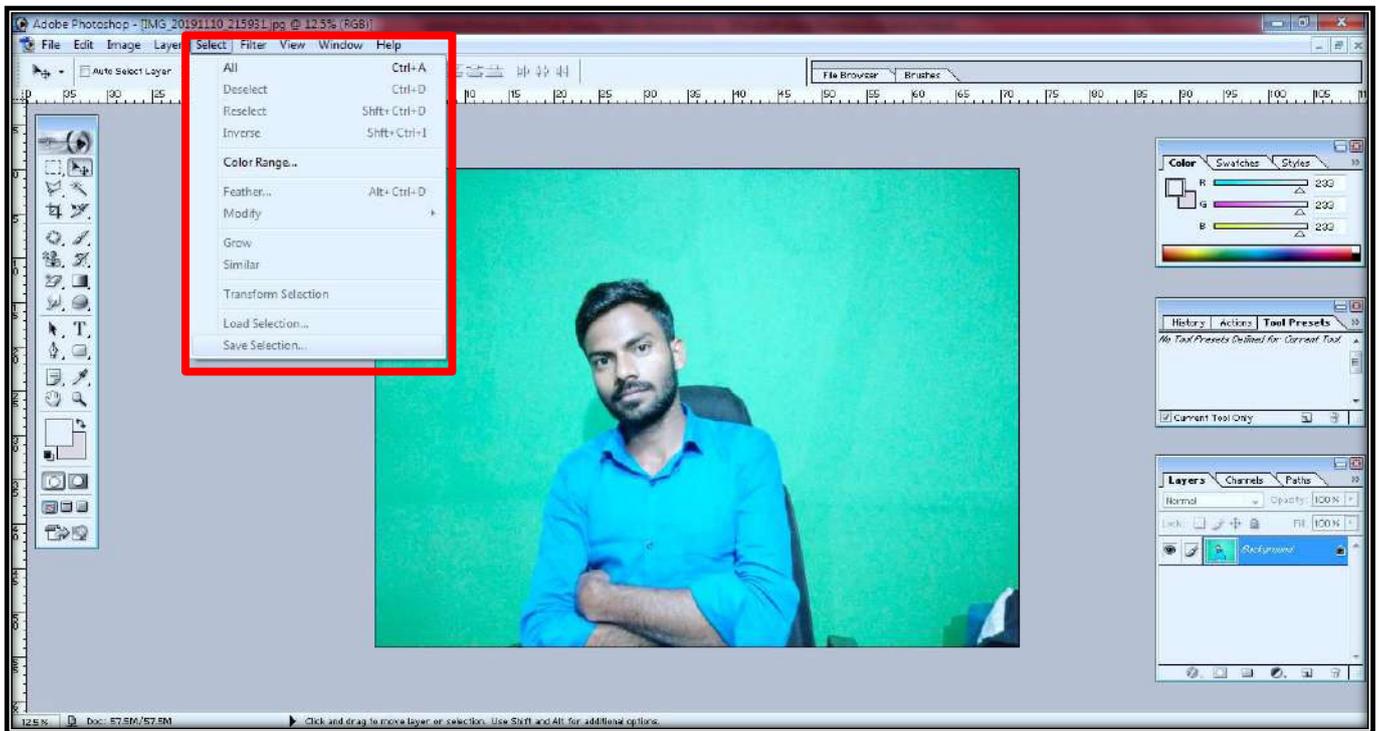

(16) **Lock All Linked Layer:** It is used to lock all linked layer.

(18) **Merge Layer:** This is done to merge the linked layer.

(19) **Merge Visible:** It is also used to merge the layer but it merges only the visible layer, otherwise not the hide layer.

(20) **Flatten:** It also works like Merge Visible, but it works the opposite way, by deleting the hide layer.

Photoshop Part-7, Select Menu

- (1) **All:** All to do select
- (2) **Deselect:** After selecting any object, use it to deselect it again.
- (3) **Reselect:** Use it to re-select any object selected.
- (4) **Color Range:** It is also used to select Pixel, but it does not take much time to select a photo.
- (5) **Feather:** During selection, corner is used to add some blur.
- (6) **Modify:** Let me tell you that this option is visible on the layer itself, in which you are used to place borders, smoothen, reduce the selected selection.
- (7) **Glow / Similar:** The layer selected with the help of both Glow and similar is used to increase the selection according to the color.
- (8) **Transform Selection:** This option is used to rotate after selecting a part of the layer.
- (9) **Load / Save Selection:** With this help is done to select the layer, after that you can use the save selection.
